

RefectoCil
EYELASH LIFT
Tips & Tricks

“GOOD TO KNOW”

Tips for application

1. Make sure that you use the right lifting pad. Lashes must cover the whole pad. If they are too short and end in the middle (thickest part) of the pad use a smaller pad.
2. The lashperm & neutralizer solution should be applied starting from the middle going down to the lower part of the lashes. Leave the tips completely uncovered.
3. Apply some glue to the first part of the pad and also on to the first part of the lashes. Wait for 15 seconds. Then fix the first part. Repeat this section by section until all lashes are fixed. Wait until the glue is dry before applying Lashperm.
4. If some individual lashes come off the pad during the treatment, wipe off the solution, use some more glue, wait again for 15 seconds and fix the lashes.

“GOOD TO KNOW” Tips for application

REFECTOCIL EYELASH LIFT

For longer and thicker looking lashes in just 13 minutes!
The effect lasts 6 weeks.

RefectoCil Eyelash Lift lifts lashes and creates an intense, wide-eyed look. The lift makes your natural lashes look significantly longer and thicker. Unlike RefectoCil Eyelash Curl, where the lashes are given a U-shaped curl, Eyelash Lift lifts the lashes up. The unique formula containing collagen & cysteine works in JUST 13 minutes. The especially developed lifting pads, made in Germany, fit along the curvature of the lid perfectly, are available in 3 sizes, and can be used up to 100 times. You can colour your lashes immediately after the lifting treatment.

Allergy test: carry out an allergy test before the treatment. Apply a small amount of both lotions with a cotton bud to your elbow or behind your ear. Allow to dry and keep the area unwashed and uncovered for 24 hours. If your skin is irritated, do not use the product.

1. PREPARATION

Remove contact lenses. Then clean the eye area with RefectoCil Eye Make-Up Remover and degrease the eyelids and lashes with RefectoCil saline solution. To make things easier, you could place RefectoCil silicone pads (available separately) over the bottom lashes to cover them. This ensures that you only secure the top lashes to the lifting pad later on.

2. SELECT LIFTING PAD

The shorter the lashes and the more lifting effect the client wants, the smaller the pad size.

S: strong lifting effect; especially for short lashes

M: natural lifting effect; for normal lashes

L: subtle lifting effect; for very long lashes

Before

After

3. POSITION LIFTING PADS

Apply sufficient glue to the back of the lifting pads - allow to dry for a short time. Hold the eyelid taut with your fingers and position the lifting pad at the edge of the lid as close to the lash line as possible.

4. SECURE LASHES

Now, apply some glue to the domed area of the lifting pads - allow to dry for a short time. Secure the top lashes with the rosewood stick using a sweeping

upwards motion. Swipe the lashes evenly along the lifting pad, keeping them straight.

If some lashes are crossed, carefully release and re-secure them. If lashes are stubborn or keep coming loose, apply some more RefectoCil Glue and re-secure the lashes.

When all lashes are stuck straight, ask the client to open her eyes. You can then see if any of the bottom lashes are stuck to the lifting pad. If they are, carefully remove them with the rosewood stick to ensure that only the top lashes are lifted.

5. APPLY LASH PERM

Place a pea-sized amount of RefectoCil LashPerm 1 into the RefectoCil Cosmetics Bowl 1.

Using the RefectoCil Cosmetics Brush 1, apply a strip of RefectoCil LashPerm 1 to the middle of the lashes. **Allow to work for: 8 minutes.** Afterwards, dab off the LashPerm 1 with a dry cotton bud.

6. APPLY NEUTRALISER

Place a pea-sized amount of RefectoCil Neutraliser 2 in the RefectoCil Cosmetics Bowl 2. Using the RefectoCil Cosmetics Brush 2, apply a strip of Neutraliser 2 to the same area where you applied LashPerm 1. **Allow to work for: 5 minutes.** Afterwards, dab off the Neutraliser 2 with a dry cotton bud.

super quick!
8 + 5 min.

7. COLOUR LASHES

The lashes can now be dyed with RefectoCil Colourant on the lifting pads. It only takes 2 minutes to work! Afterwards, remove the dye with a damp cotton pad.

To avoid stains on the lifting pads: max. 2 minutes application time. Rinse immediately afterwards.

8. REMOVE LIFTING PADS

Wipe the pads several times with a damp cotton pad until the moisture dissolves the glue. If needed, gently wipe up and down until the glue is completely removed. Then hold the lid taut as you remove the lifting pads, starting from the outside.

Problem solving

- If the curve of the eyelashes is too strong, the selected lifting pad was too small or the application time too long. Select a larger lifting pad and repeat the process using half the application time.

- If the curve of the eyelashes is too weak reasons could be: application time too short (with LashPerm or Neutralizer), the roller too large, or eyelashes not cleansed correctly.

IMPORTANT INFORMATION:

LashPerm, Neutralizer: 3,5 ml. Best used before the end of (MMYY): see tube fold. After opening: 2 months. Always close the tube immediately after use.

Glue: 4 ml. Best used before the end of (MMYY): see container. After opening minimum: 3 months. Shake before using. Always close the container immediately after use.

Store products in cool and dark place. Always clean cosmetic brushes and cosmetic dishes immediately after use with RefectoCil Saline Solution.

Best used before the end of / Batch number: see container.

ATTENTION: For professional use only. Avoid contact with eyes. Rinse immediately if product comes into contact with them. Wear suitable gloves.

LASHPERM: Contains ammonia. **NEUTRALIZER:** Contains hydrogen peroxide.

“GOOD TO KNOW”

Facts about the formula and effect of Eyelash Lift.

Super quick formula! But which changes made it this quick?

- The emulsion has been optimized! It contained components that used to reduce the durability which led to a longer application time. These components were eliminated.
- The ingredients have been improved and harmonized with each other. The pH value has also been slightly changed. Therefore the application time could be reduced drastically without being less gentle to the lashes.
- The rest stays company secret. We confirm, that all our formulas meet the requirements of the EU cosmetics regulation and are not only harmless in use but nurturing.

Exceptional care formula with Collagen & Cysteine!

The ingredients pamper the lashes already during the treatment and let them appear groomed and full.

Collagen:

Belongs to the structural proteins found most often in the human body. Collagen wraps the hair, binds moisture and prevents it from drying out. Therefore the water-soluble Collagen-Hydrolysate is often used in shampoos or conditioners as it makes combing of wet hair easier. It makes the hair smoother and more voluminous.

Cysteine:

An amino acid that is significant for the hair structure. It protects and strengthens the sensitive hair roots and is responsible for the development of keratin which supports hair growth.
